Backend Developer

First of all, my name is Alvieto Haykal. I love coding and am interested in solving problems while coding. A skilled, competent, and diligent individual, specializing in the backend web development (Laravel - NodeJS/Express/Nest). For the last 2 years, I have been developing applications using PHP, JavaScript, and TypeScript programming languages. At this time I am working as a freelancer making website projects ordered by individuals or institutions. I've hands on in all stages of the programming cycle, from planning to development and deployment. No two days are the same for me; my tasks may involve analyzing algorithms, altering code, fixing bugs, brainstorming ideas for integrating new systems.
