Fullstack Developer

A skilled, competent, and diligent individual, specializing in the fullstack web development (Laravel/CI - Go/Fiber - NodeJS/Express/Nest – ReactJS/Next). For the last 3 years, I have been developing applications using PHP, Go, JavaScript & TypeScript programming languages. I love coding and am interested in solving problems while coding. I've hands on in all stages of the programming cycle, from planning to development and deployment. No two days are the same for me; my tasks may involve analyzing algorithms, altering code, fixing bugs, brainstorming ideas for integrating new systems.

Experience

Fullstack Developer, PT Bimasakti Multi Sinergi (Sept 2022 – present)

- Maintain and develop features SpeedCash:
  - API for inquiry, payment and reporting
